

**Memo 1: Confidential Communication****From:** Dr. Varma**To:** Executive Board, Boon Labs**Date:** [REDACTED]**Subject:** Urgent Developments and Ethical Concerns

Esteemed Members of the Board,

I am writing to inform you of significant breakthroughs in our current research regarding the engineered pathogen VX-47. The virus has shown remarkable replication and transmission capabilities in controlled environments. Equally important, I have successfully developed a treatment protocol that can neutralize its effects within 72 hours.

However, I have grave concerns regarding the ethical and humanitarian implications of our collaboration with the Pharma Consortium. If these advancements are misused for financial gain rather than public safety, the consequences could be catastrophic.

I strongly urge the Board to reconsider the current trajectory of our partnership with the Consortium. Our focus must remain on scientific integrity and global health rather than profit maximization.

Sincerely,

Dr. A. Varma

Lead Researcher, Boon Labs
